DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baker et al. [US 5,712,764] in view of Burdick [US 6,621,688].

Regarding claim 1, Baker et al. disclose a structure (figure 3) for wiring a wiring harness for an automobile between an electronic control unit (a control unit includes a cassette and three knobs as shown in figure 3) and one or more devices (44), the automobile having a steering member extended from a driver's seat side of the automobile to an assistant's seat side of the automobile a control module arranged at a center in a width direction of the steering member and an electronic control unit for controlling the devices arranged at the assistant's seat side of the steering member and a plurality of units arranged at the driver's seat side, the structure comprising (figure 3):

- a support member including:
 - a first portion having a first connector (a plurality of connectors as shown in a left side of the panel 36) for connection with the devices (44);
 - a second portion housing the electronic control unit (a box covering the control unit as shown in figure 3); and

Application/Control Number: 10/731,101

Art Unit: 2841

a third portion (a middle section connecting between the first and third sections as shown in the figure 3) being formed in a slim shape and interconnecting the first portion and the second portion; and

- a wiring harness, wherein the wiring harness interconnects the first connectors and the electronic control unit (figure 3);
- wherein the support member is arranged along the steering member in a manner that the third portion is connected between the control module and the steering member.

Baker et al. disclose the instant claimed invention except for the wiring harness being arranged in a housing member.

Burdick discloses an electrical distribution system (figures 1-3) having a wiring harness (10), wherein the wiring harness is formed in a housing member (14, figure 1).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to arrange the wiring harness in a housing member of Baker et al., as suggested by Burdick, for the purpose of protecting the wiring harness to be broken in a dashboard of a vehicle.

Regarding claim 2, Baker et al., as modified, disclose wherein a control unit has a multiple function to control such as a heater, a ventilator, an air conditioner and distribution doors (figure 3).

Regarding claim 3, Baker et al. disclose the instant claimed invention except for the electronic control unit comprising a second connector mating with the first connector, an amplifier for a meter and an air conditioner control amplifier.

Application/Control Number: 10/731,101

Art Unit: 2841

Burdick discloses the control unit comprising a plurality of connectors (88, 90) mounted therein, an amplifier for a meter and air-conditioner control amplifier (column 4, line 51- column 5, line 15).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have an additional connector in Baker et al., as suggested by Burdick, for the purpose of providing additional connectors to connect different kinds of various devices.

Regarding claim 4, Baker et al., as modified, disclose wherein the first portion comprises a plurality of first connectors for connection with the devices and the control unit is arranged between the first portion and the second portion (figure 3).

Regarding claim 5, Baker et al., as modified, disclose the firs connectors are formed in a unified shape having a unified terminal alignment and connected with a power bus circuit and a superimposing communication unit of the electronic control unit (figure 3, column 3, lines 17-31).

Regarding claim 6, Baker et al., as modified, the third portion is so dimensioned fitting between the control unit and the steering member.

Burdick discloses the third portion is so dimensioned as to be insertable in space from between the control unit and the steering member (figures 1-2).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the arrangement of the third portion design of Burdick in Baker et al., for the purpose of saving space to distribute the wiring harness in the structure.

Application/Control Number: 10/731,101

Art Unit: 2841

Conclusion

The prior art made of record and not relied upon is considered pertinent to 3.

applicant's disclosure:

Kubota [US 6,257,897] discloses a wiring harness device for instrument

Page 5

panels; and

Takiquchi [US 6,062,888] discloses a wire harness device for use in

instrument panesl.

Any inquiry concerning this communication or earlier communications from the 4.

examiner should be directed to Hung S. Bui whose telephone number is (571) 272-

2102. The examiner can normally be reached on Monday-Friday 8:30AM-6:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Elvin G. Enad can be reached on (571) 272-1990. The fax phone number

for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
